

Subsalt seismic imaging; Recent advances and the way forward

Presented by Tim Brice, WesternGeco

Contributors: Jerry Kapoor, Nick Moldoveanu, Chris Cunnell, Stuart Papworth, Denis Vigh

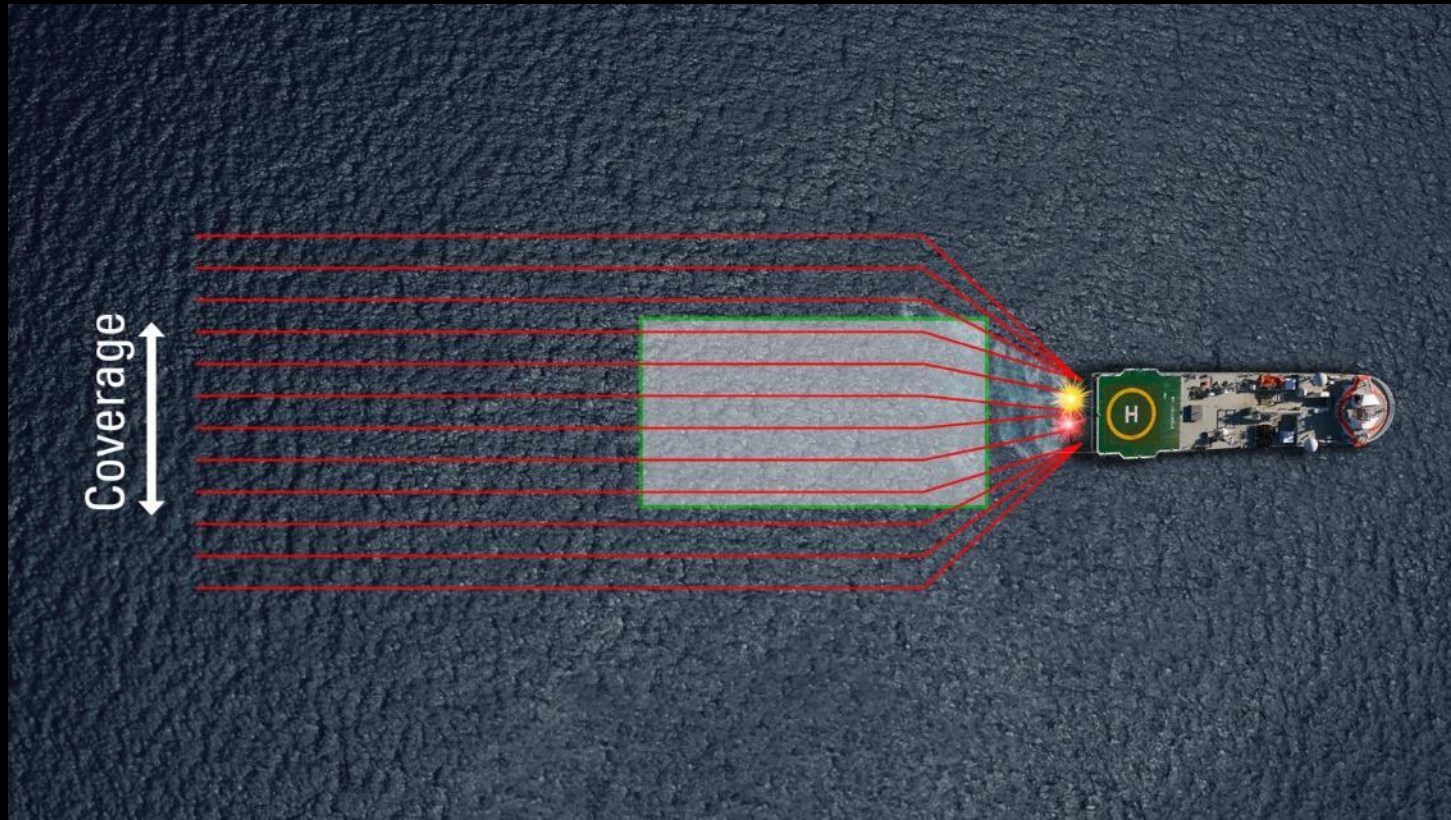

Outline

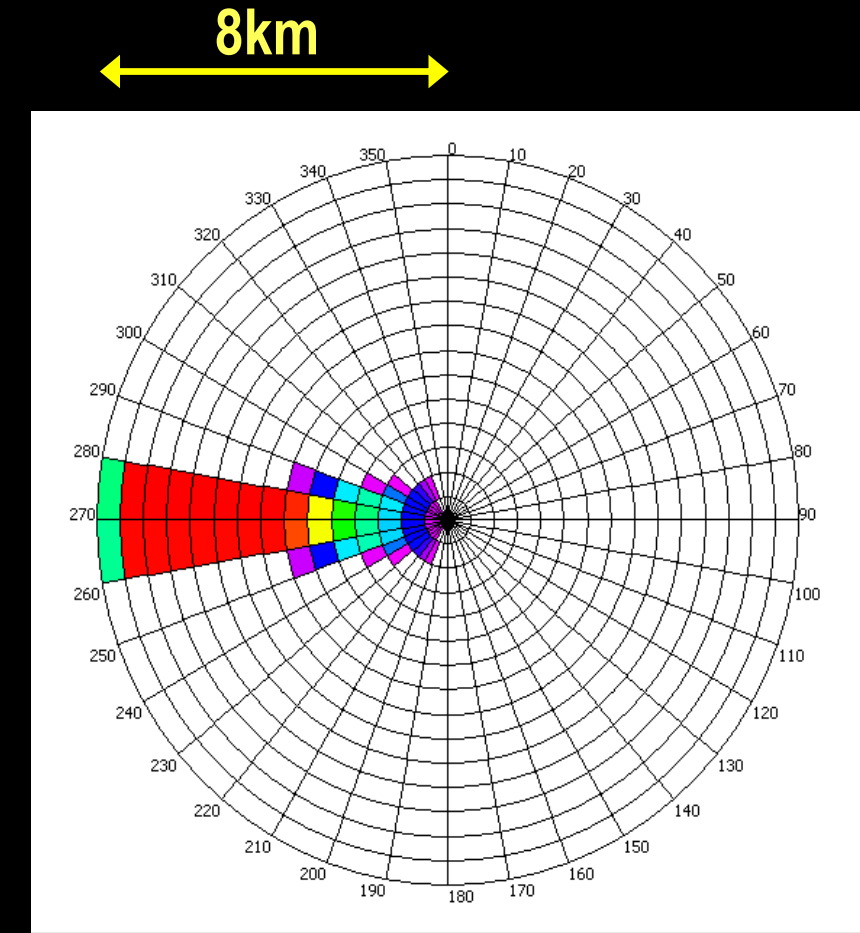

- Recent advances
 - Acquisition technology
 - Processing/imaging technology
- Nordkapp Basin survey
- The way forward

Marine towed streamer acquisition

Streamer acquisition offset and azimuth

Seismic data acquisition designs azimuth and offset

Narrow Azimuth

NAZ Pre 2005

Multi Azimuth

MAZ Pre 2005

Wide Azimuth

WAZ 2005

Rich Azimuth

RAZ 2006

Full Azimuth

FAZ 2009

Parallel acquisition geometries for wide azimuth acquisition

Azimuth and offset Coverage

Imaging improvements

2005 NAZ

2008 WAZ

Imaging improvements

NAZ

WAZ
2006

Ray trace modeling study

Ray trace modeling study

WAZ acquisition

Ray trace modeling study

Areal geometry

Illumination maps for full azimuth geometries

Areal 7x7 kms offset

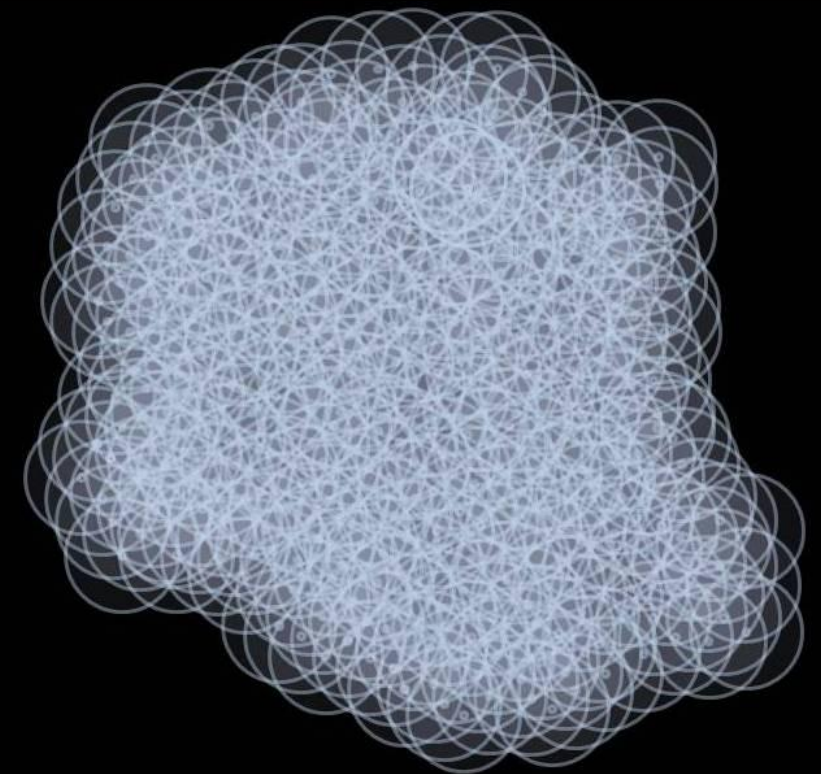

Areal 10.5 x 10.5 kms offset

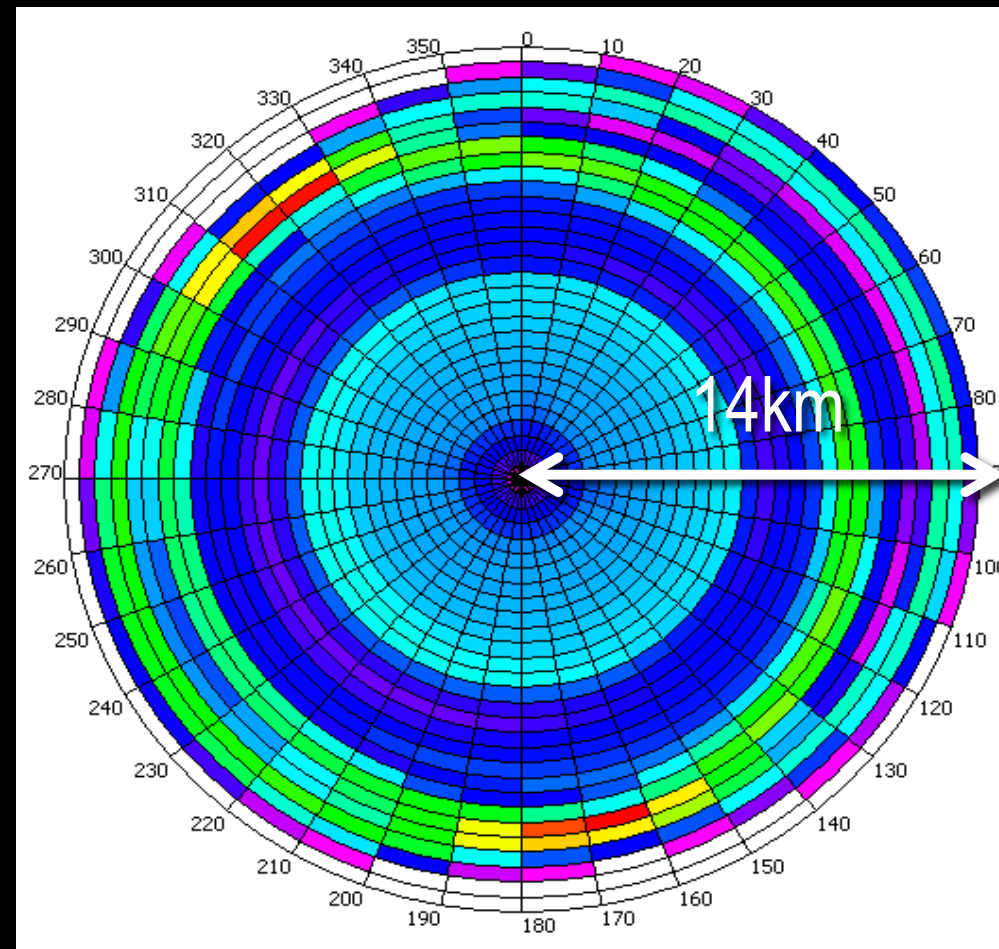

Areal 14 x 14 kms offset

Dual coil design

Dual Coil geometry for full azimuth long offset acquisition

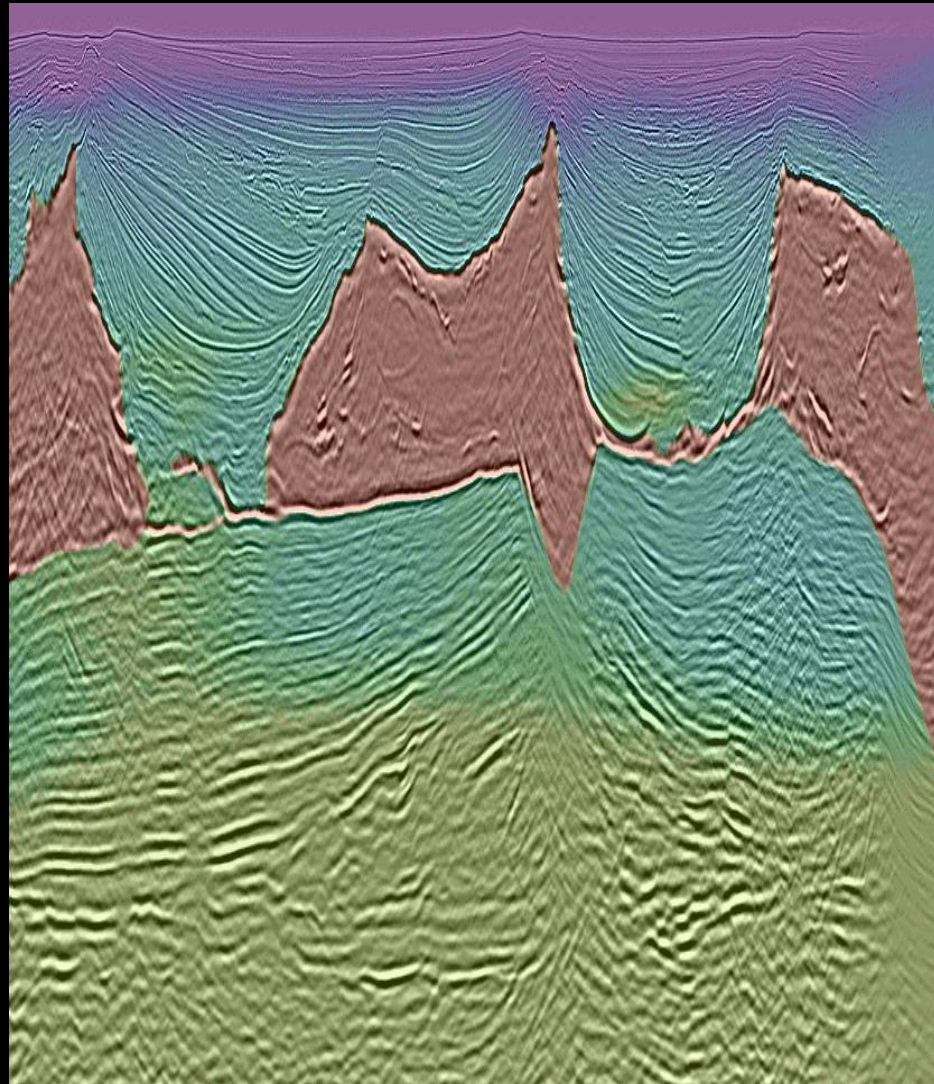

Azimuth and offset Coverage

Imaging improvements

2005 NAZ

2008 WAZ

2013 Dual Coil

Better illumination with Dual Coil

Wide azimuth

Full azimuth, long offset

Better illumination with Dual Coil

Wide azimuth

Full azimuth, long offset

Better illumination with Dual Coil

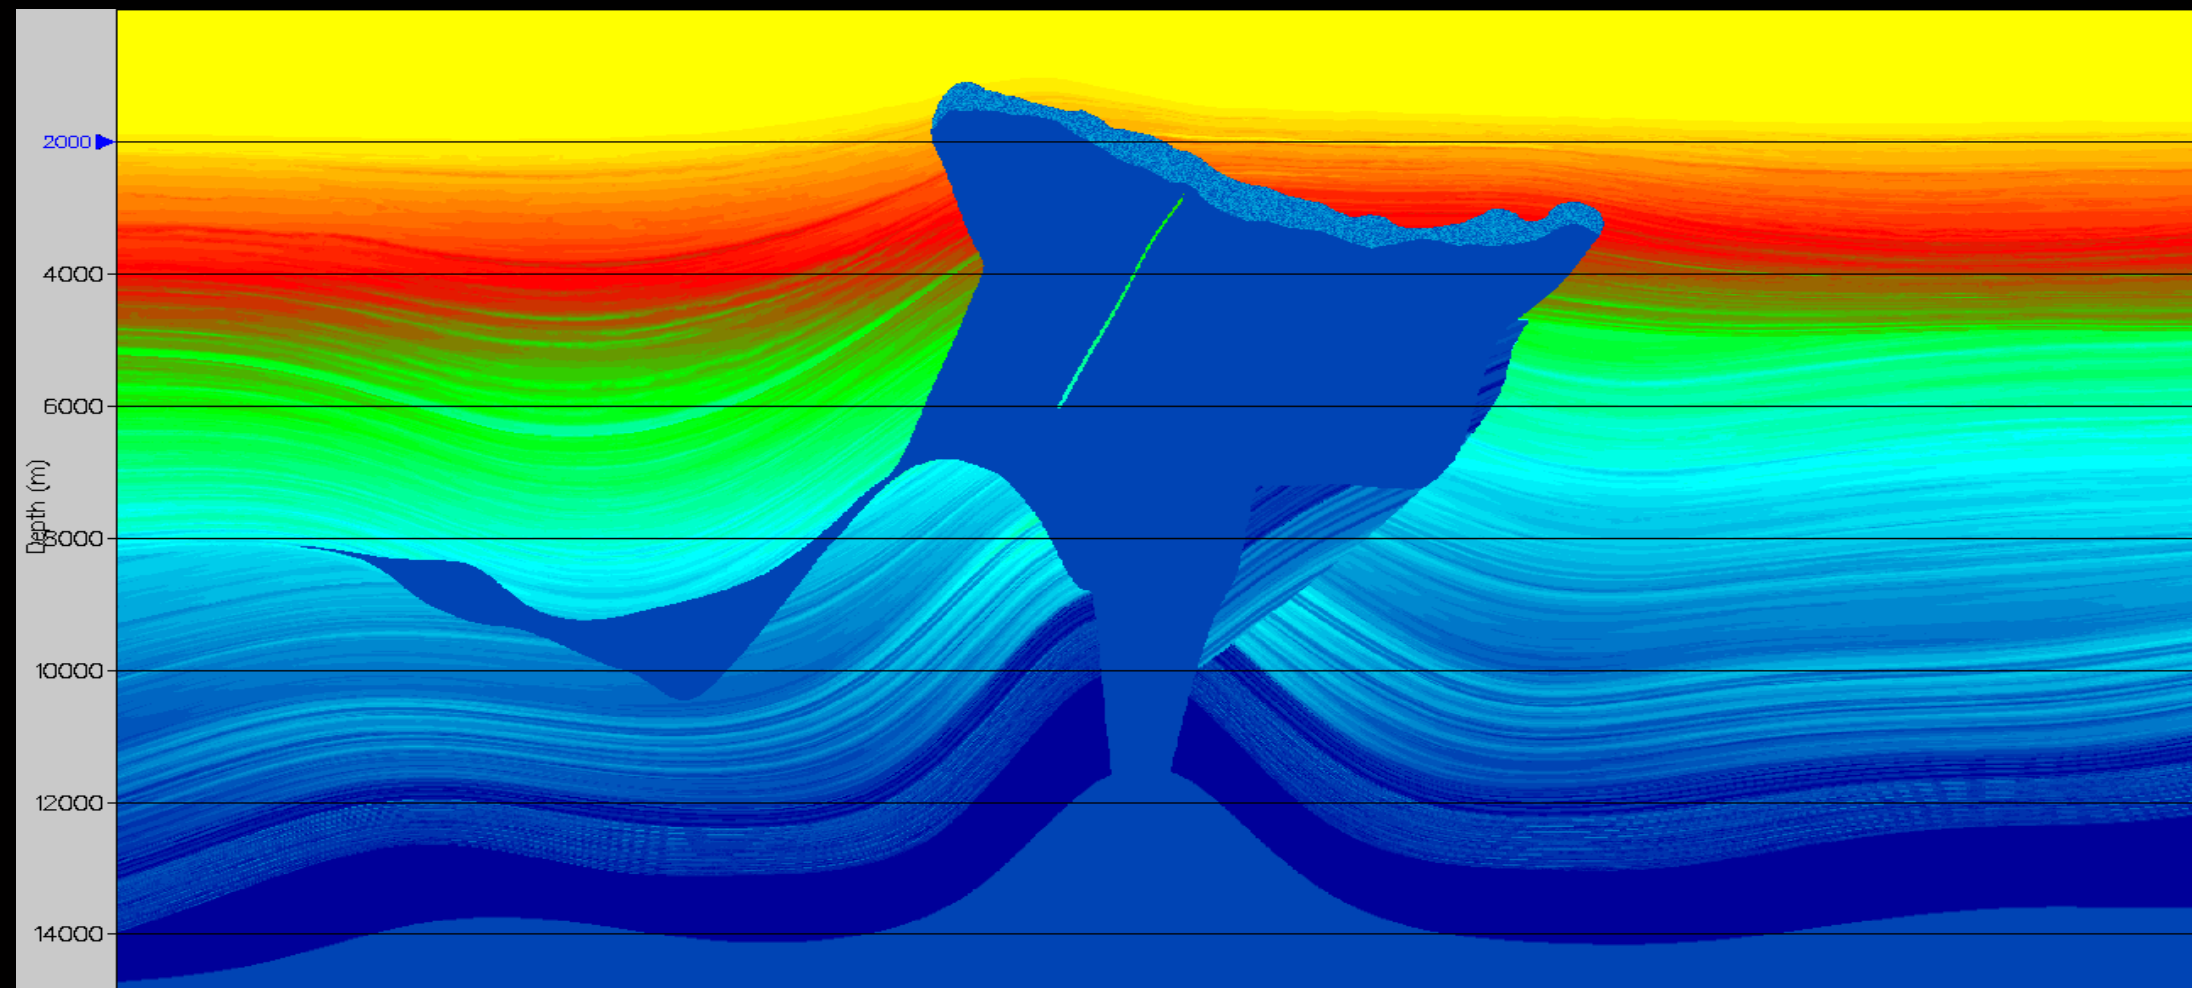

Wide azimuth

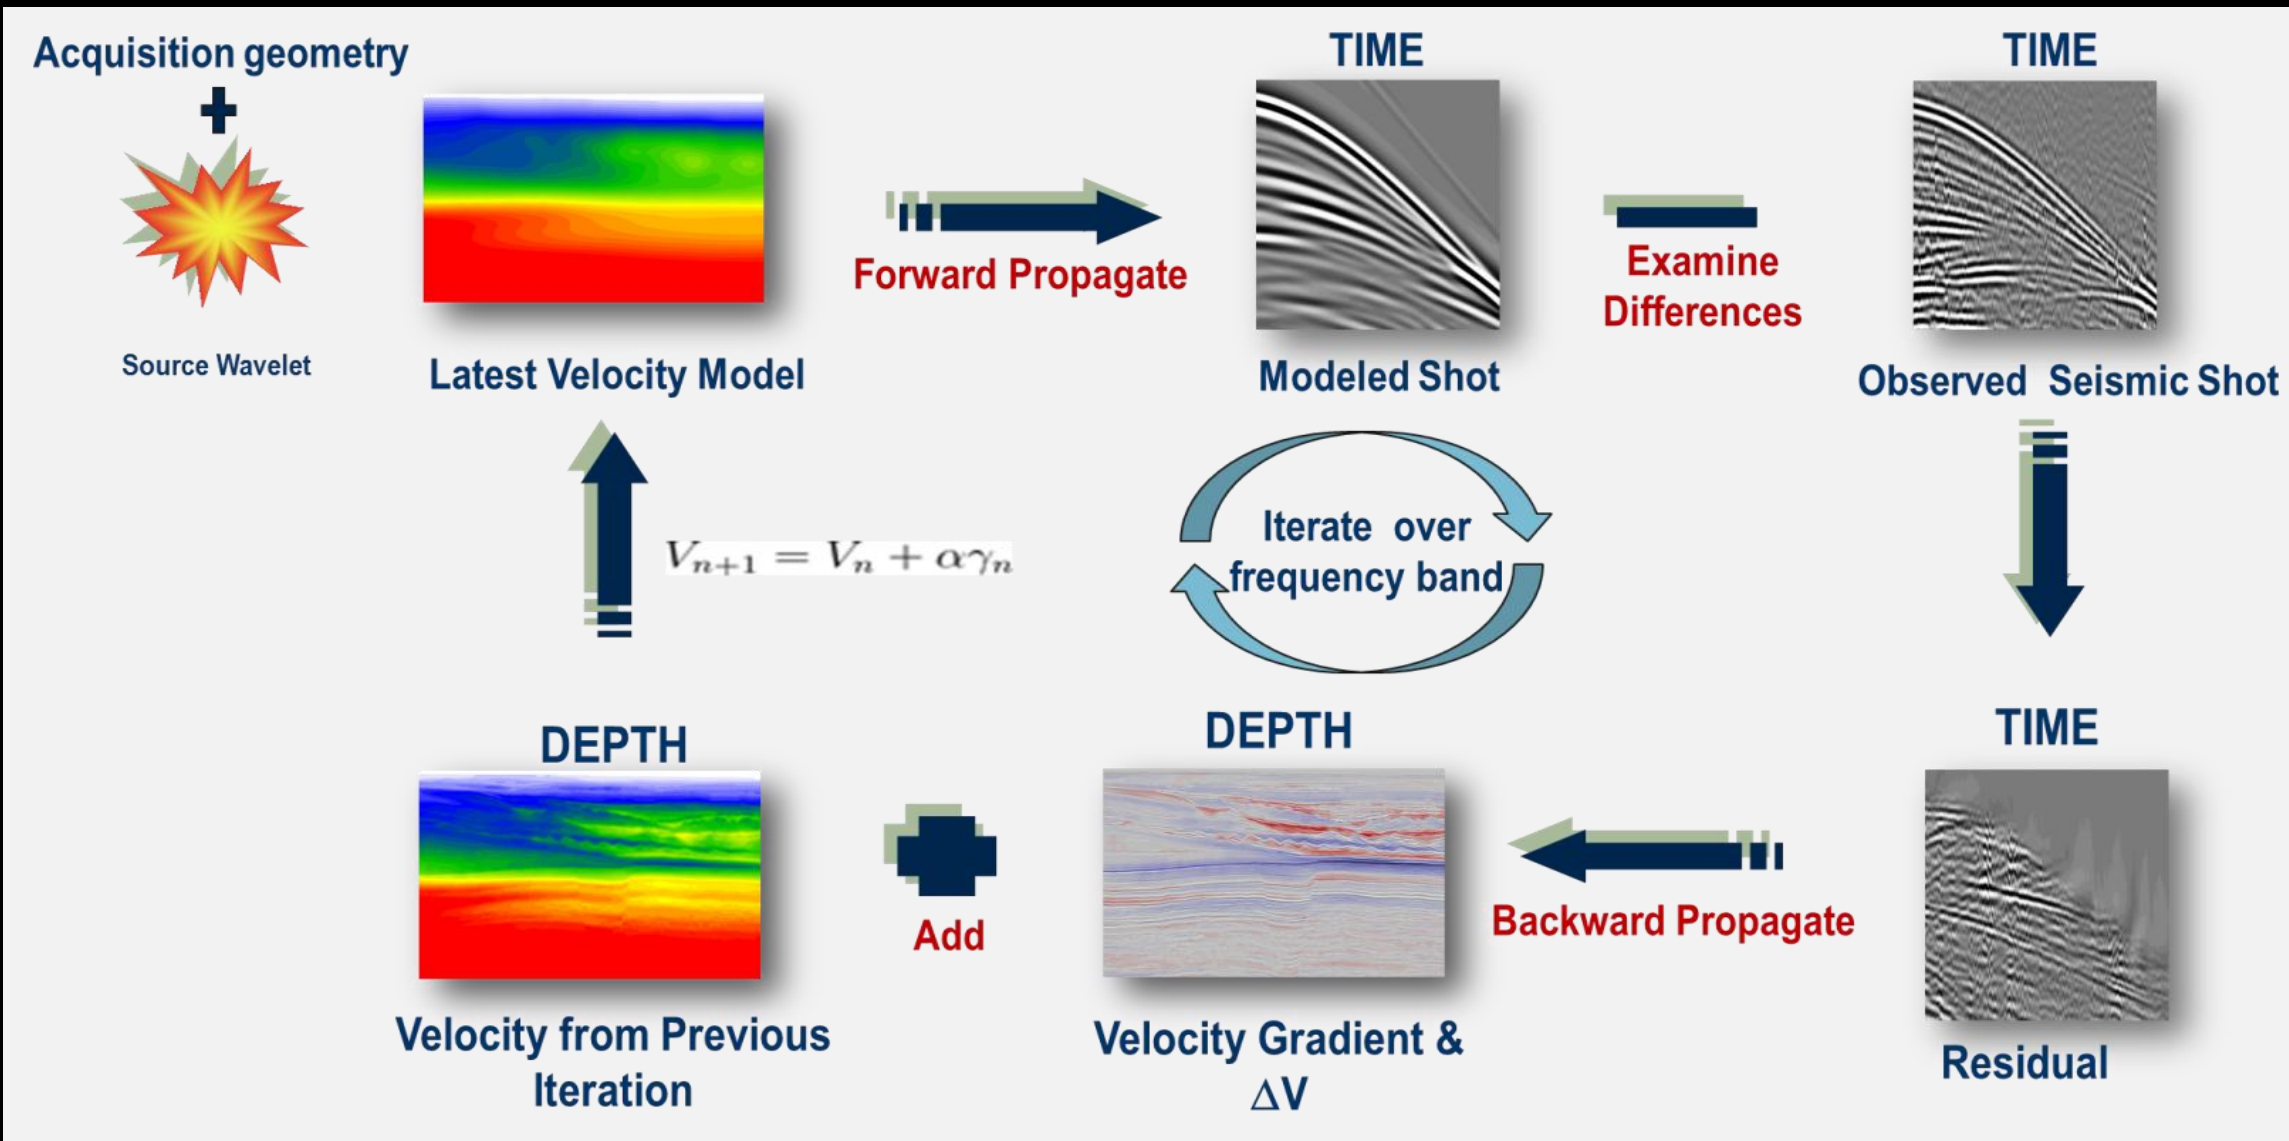

Full azimuth long offset

Data Processing – Model building & imaging

Full waveform inversion

Improved velocity detail with FWI

FWI in the Barents Sea

Example from Nordkapp Salt body

Long offset for full waveform inversion

Reverse Time Migration

High-end pre-stack depth migration

- Two-way wave propagation in Time based on numerical solution of two-way wave equation
- Source/Receiver wavefield propagated independently from actual depth
- Handling all aspect of wave propagation, including prismatic & diving waves, hence no dip limit

Imaging in areas of the greatest complexity

- Subsalt images
- Overhanging salt, steep flanks of salt bodies and steep channels
- Imaging under very complex shallow sections

Handles Complex Velocity Models

- Isotropic, Anisotropic (VTI, TTI and orthorhombic) velocity models
- Supports highly detailed models
- Handles large velocity contrasts within models

BP EAGE 2004 Model

Migrated Image Space

Migration Algorithm comparisons

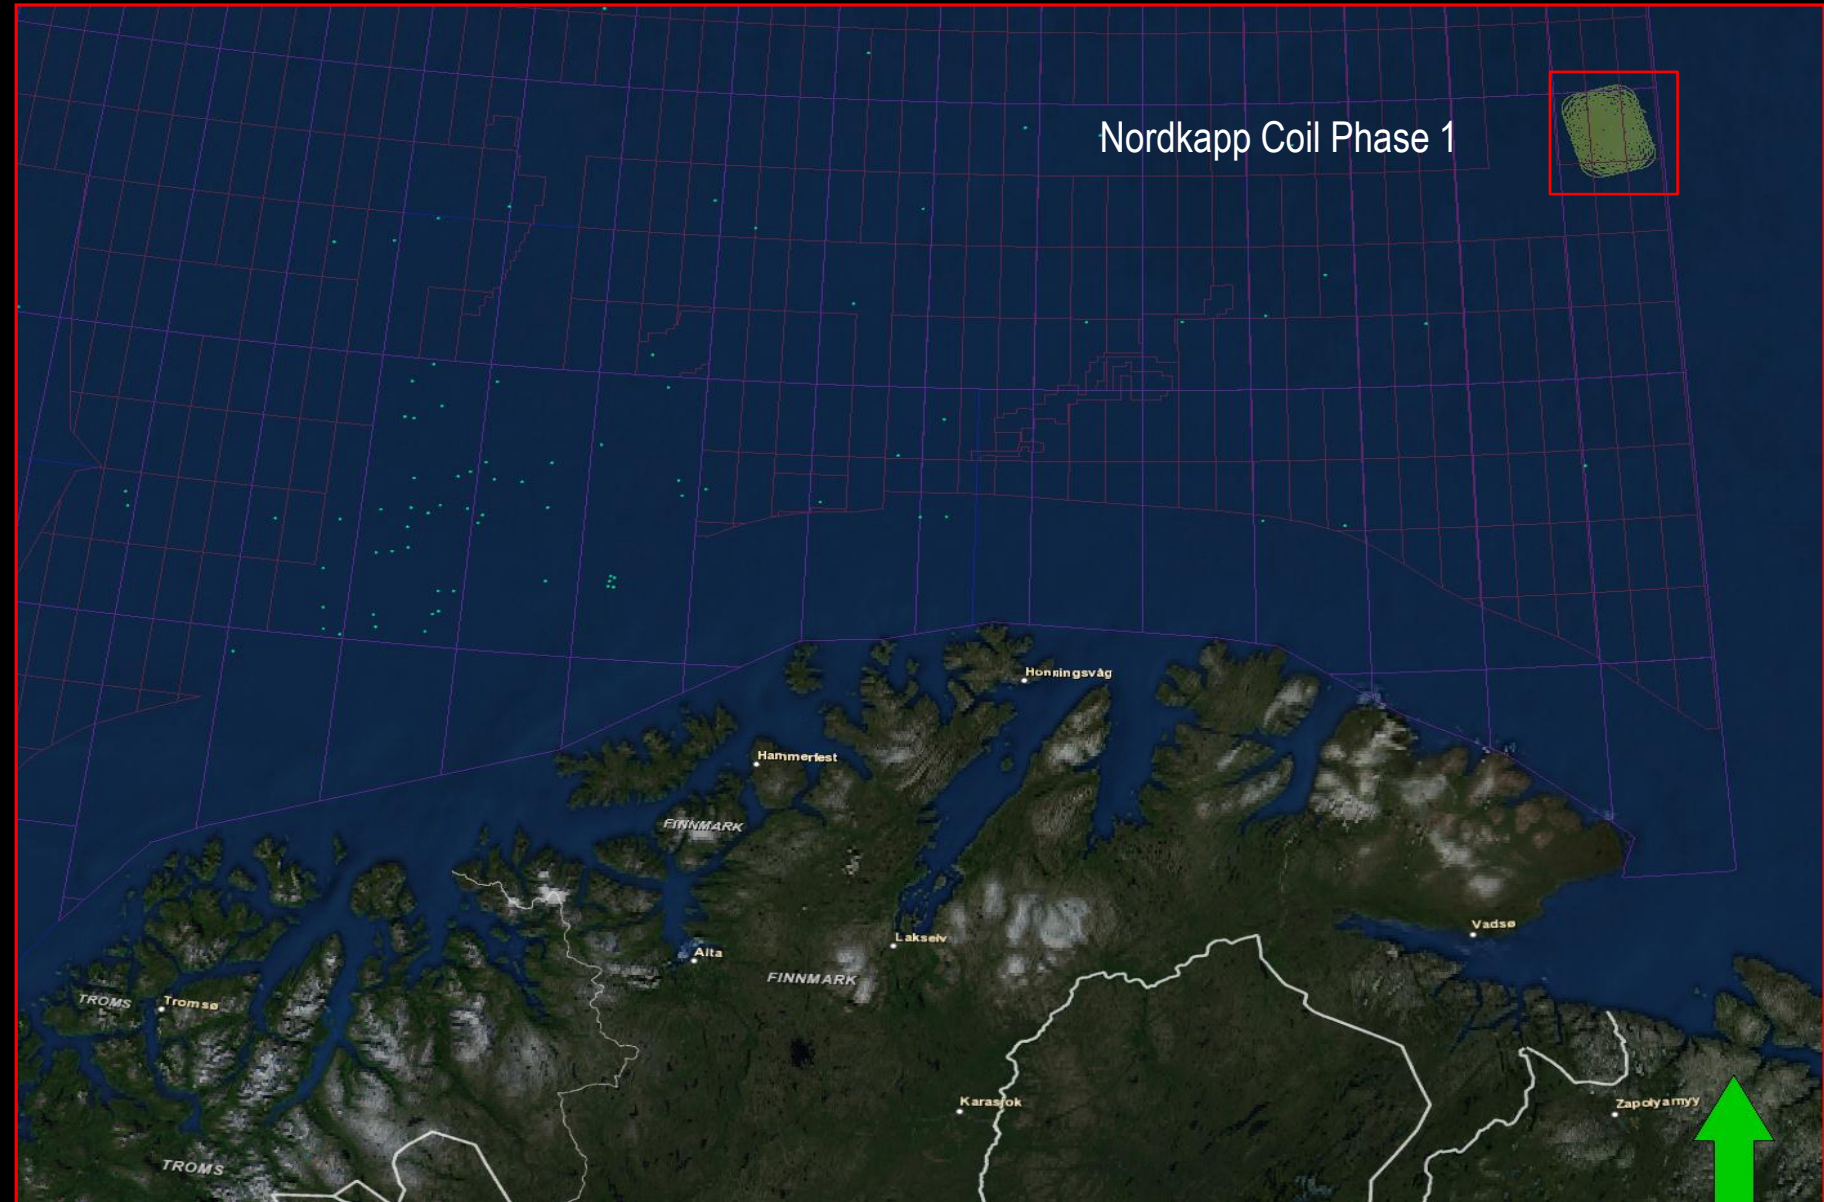

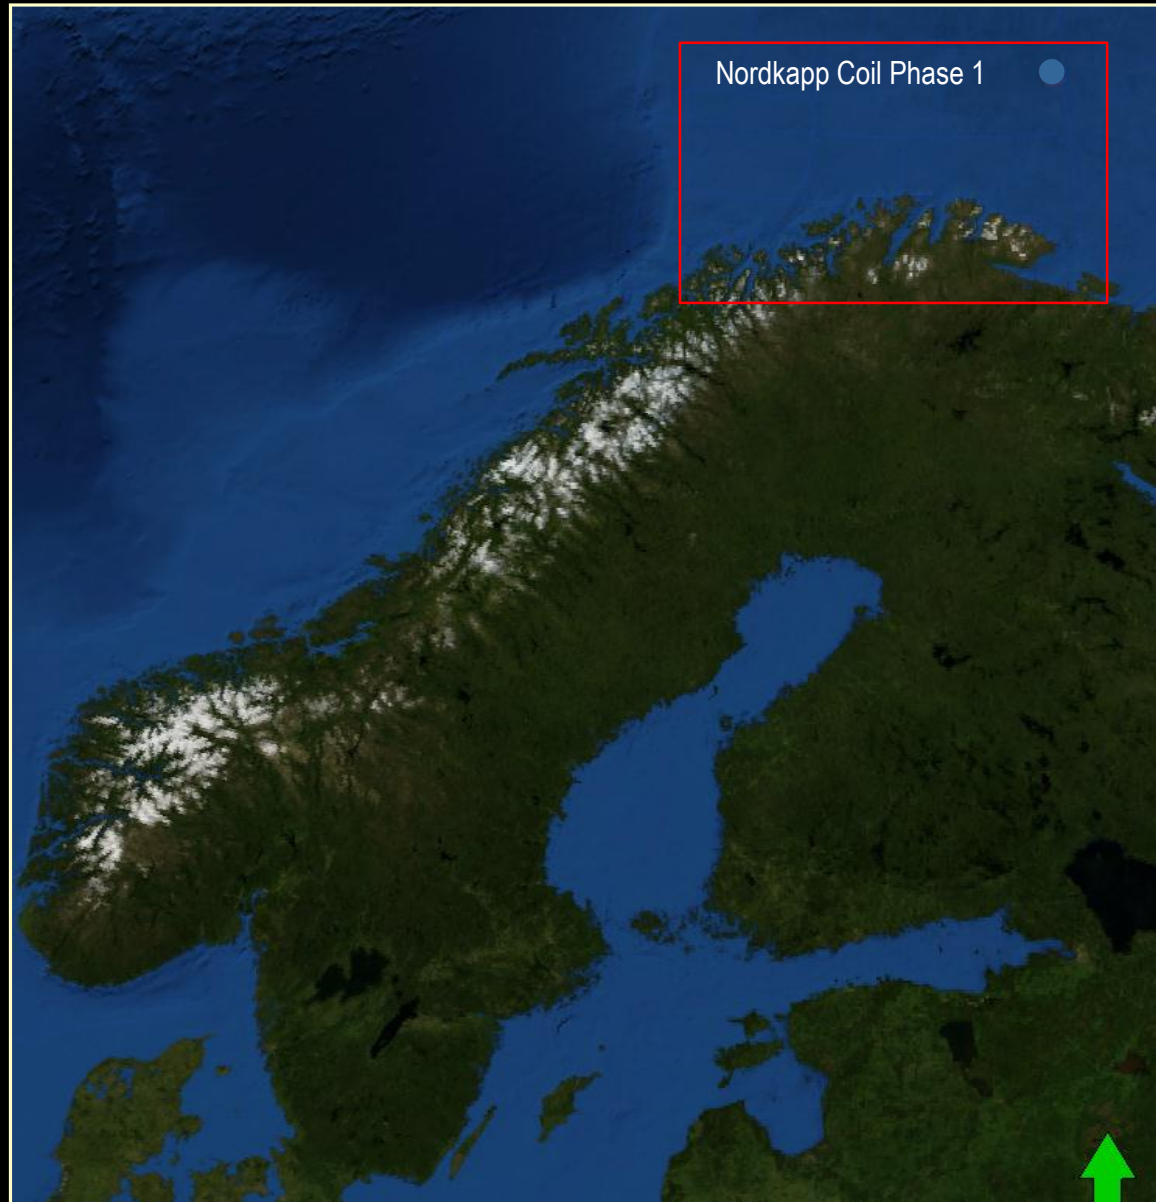

Kirchhoff

RTM

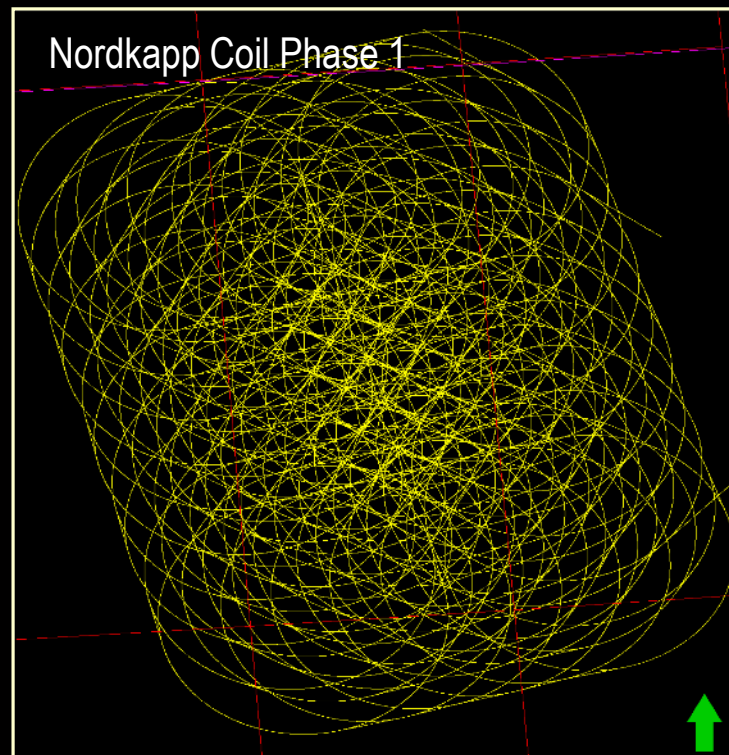

Location – Nordkapp Basin Block 7231

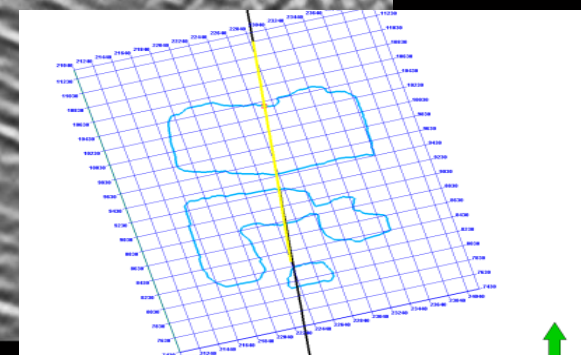

Acquisition Summary

- Full Azimuth - Single Vessel Coil
- High Fold – 8km maximum offset

Nordkapp Vintage 2D acquisition

Nordkapp 2012 Single vessel ObliQ broadband COIL acquisition

Optimised Weighted Stack – Salt Bodies

Future Directions

- Improvements in spatial and temporal seismic resolution and amplitude accuracy
 - Dense seismic sampling and ultra long offsets
 - Improved seismic sources
 - Implementing imaging algorithms from acoustic to elastic
 - Joint migration (including multiples) and inversion
- Reservoir characterization
 - Elastic rock properties
 - Pore properties
 - Fracture characterization
 - Permanent monitoring

New acquisition test : 2 recording vessels and 6 sources 29 Km maximum offset and continuous recording

Subsalt imaging improvements with 29 kms offset test data

2x4 Dual COIL

2x4 Dual Coil plus 2x6 test

2x6 Dual Coil Long-offset contribution

Unlocking the Nordkapp Basin

A four year plan

FTG Gravity - 2014

CSEM/MT - 2015

Dual COIL Seismic - 2016

The pathway to subsalt

Resolve the
overburden

Define the salt

Image subsalt

Refine top-salt

- Rugose top-salt
- Top defines base
- Spatial sampling for accurate interpretation?

Conclusions

- Acquire full azimuth, long offset broadband data
- Multi-vessel coil shooting can generate very efficiently full azimuth, long and ultra-long offset data
- Build accurate earth models with FWI
- Image with RTM
- Keep improving both acquisition and processing technologies

- **Benefits for exploration, appraisal and development**
 - Salt-sediment interface & areas of steep dip
 - Event continuity & fault definition
 - Confidence in well planning and placement
 - Less uncertainty in volumetric calculations
 - Understanding possible reservoir compartmentalization

Thank you
